

How to install USB equipment?

Your USB equipment comes with: 1 external memory (flash drive), 1 RCA audio cable, 1 power cable and 2 one inch screws.

- 1 The first thing to do is to install our equipment on a wall near your phone system using the 2 one inch screws included.
- 2 Connect one end of the RCA audio cable in the part identified with 8Ω of the USB equipment. The opposite end is installed in the audio outlet of the phone system (identified most times as MOH) or special adapter.
- 3 Install the small end of the power supplier in the spot identified as VDC in our equipment. You should connect the larger end to a power outlet (120 VAC).
- 4 You are now ready to load your message.
